

# CircularCityChallenge

The participants of the CircularCityChallenge competition will identify the problems related to climate change and, through project-based learning, propose sustainable solutions to their local governments. The idea is to practice education as a public service for the public good, rather than focus on testing. The outcomes can help transform how we teach and learn sustainability.

**We invite you to be a part of this endeavour as an official supporter!**

# How can you participate?

- **Provide financial support** for the challenge as a sponsor.
- **Sponsor an award** (such as material awards, financial gifts, paid internships, mentorships, contract offers for summer schools, sponsoring a film or invention production, etc.) for the contest winners
- Make it **possible for young people to join the prize-giving** ceremony.
- **Rent premises** for organising the competition

## Your Benefits

Through the CircularCityChallenge web platform you can present your organisation, activities, and career programs to the next generation of scientists, decision-makers, and professionals.

-  Your **logo and link** will be placed as an official sponsor on our platform.
-  Selected industry partners or representatives of companies **will be offered a seat on the jury**.
-  **You can establish contacts** with other stakeholders from industry, academia and decision-making.
-  Your participation will **support your public image**, which can then draw on your role as an ethical, socially responsible company.

The project outcomes will be useful and practical, relevant for all involved stakeholders, and act as bridges between science and technology to hands-on services, products, and actions.

The fresh visionary ideas of young people, their values, and beliefs will reach stakeholders involved in local development and decision-making stakeholders, such as industry, construction, infrastructure, and finance. They will have the potential to provide feedback on an existing service or product or point to a current market gap for a service or product that is not yet on the market.
